

Provide easy app
building and
data insights through
**Power Apps, PowerBI
and Power Automate**

INTRODUCTION

Enterprises are continuously striving for operational efficiency for their business applications. Therefore, app development platforms need to be flexible, extensible and ensure fast time-to-market. In addition, these platforms should have the option for mobile solutions to support different user groups and cater to specific business processes.

Bamboo's Power Platform addresses these challenges with its technological elements of business intelligence (BI), automation and virtual agents.

THE SOLUTION

Bamboo's Power Platform helps you build, customize and analyze business applications in a simplistic and cost-effective manner, enabled by Microsoft Dynamics platform.

Bamboo creates applications in a no-code environment, tailored to your organizational needs using Power Apps. We have created apps for several customers across industries and domains and have improved the overall app performance by streamlining processes, implementing automation and performing complex data analysis.

KEY FEATURES

Bamboo's Power Platform Center of Excellence (CoE) supports various user groups and functions across business organizations for consulting, design, governance, and guidance.

Here are our best in class offerings we have captured based on our implementation experience across industries:

APP CAPABILITY AND DEVELOPMENT

- Develop/support enterprise level, department level or citizen level Power Platform development
- Develop capabilities for key roles and empower business sponsors, admin (alerts) and developers (best practice guides)

ANALYTICS AND DASHBOARDS

- **Power App: Flow usage** – identify low adoption regions/user groups
- **Power App: Flow error trend** – identify apps/flows with increased errors
- **Monitor service performance:** Performance metrics for standard as well as custom services and connectors

USER SUPPORT AND GUIDELINES

- Best practice guide for citizen developers, security do's and don'ts
- App development support/query resolution

ENVIRONMENT & SECURITY MANAGEMENT

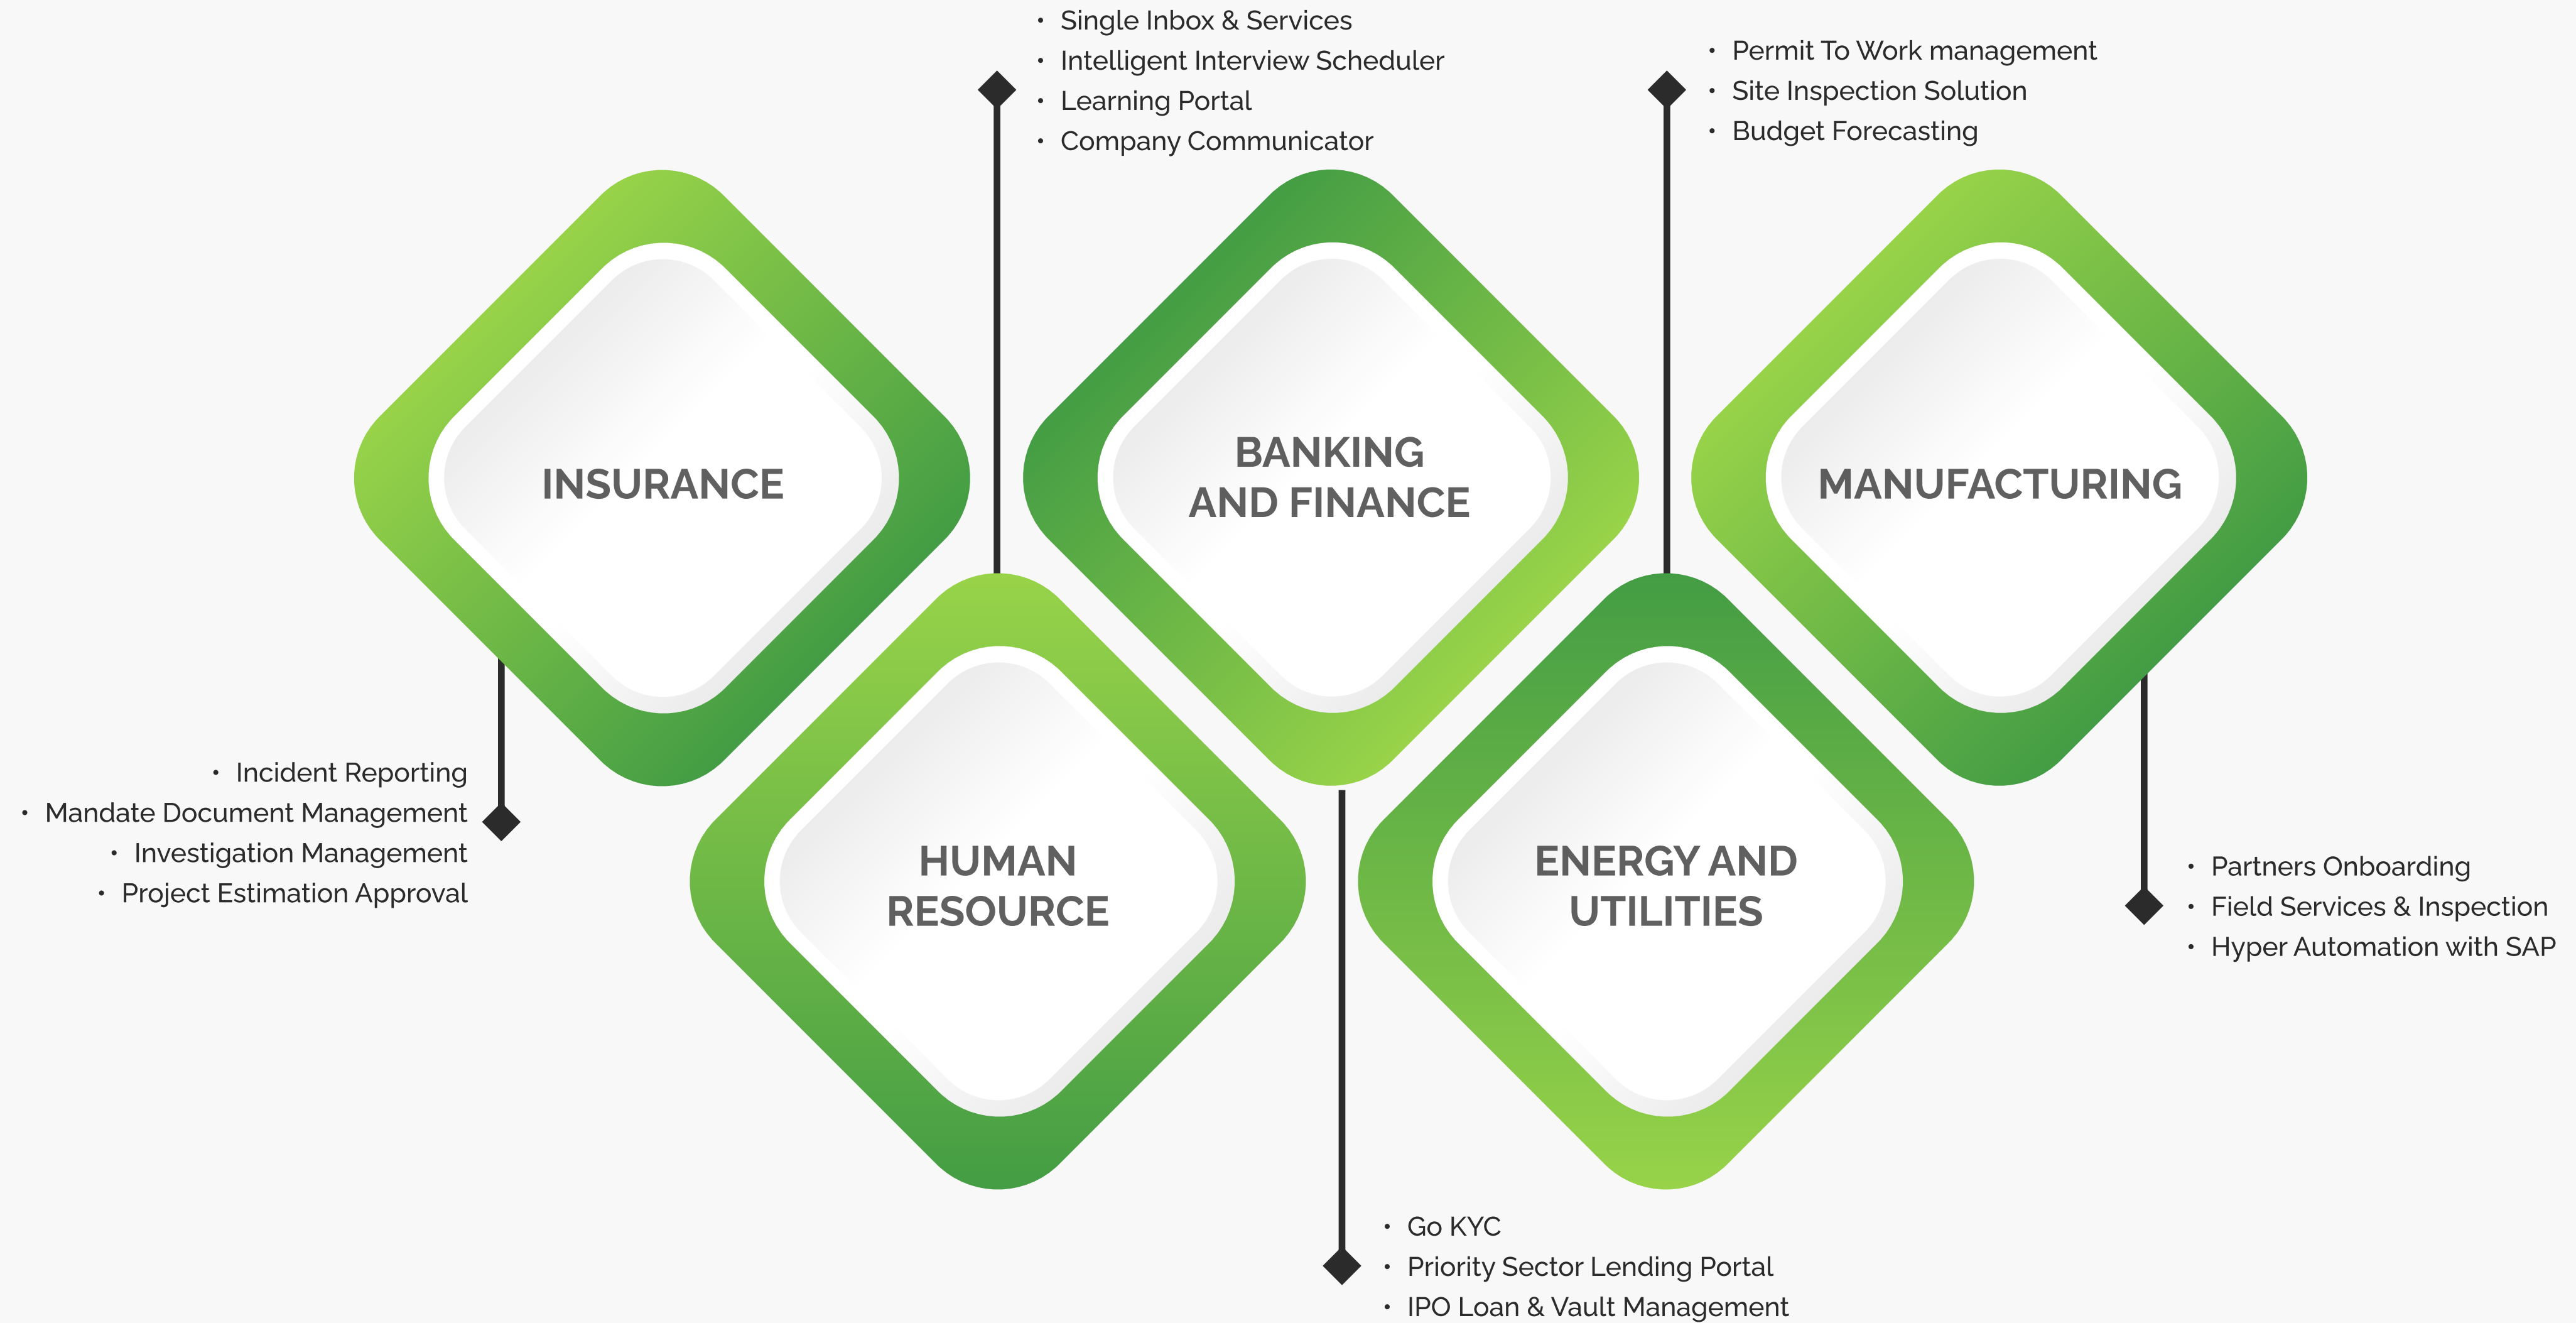

- Control new environment creation and monitor usage
- Set-up data loss prevention (DLP) policies and enforce Power Apps security policies in Microsoft Intune or similar MAM application

GOVERNANCE

- Tools, templates and checklists to enable quality delivery. Reports and dashboards for key stakeholders
- Processes for review and sign off ensuring minimum requirements are met in all Platform services

POWER APP SOLUTIONS ACROSS DOMAINS AND INDUSTRIES

BENEFITS OF POWER PLATFORM

Efficient app development capability for business users

Faster time-to-market with low code/no code framework

Quicker learning curve and easy user adoption

Business process optimization with strong enterprise governance and security

Dedicated CoE support for consulting, design, guidance, and governance

Streamlined Office 365, Azure, Dynamics 365, and Power BI integration

SUCCESS STORIES

Built 50+ Power Platform and Azure based end to end solutions for digitally transforming major internal workflows for their group office

**FOR THE LARGEST
INSURANCE COMPANY**

Using Power Platform and beyond, automated large number of workflows and have implemented Center of Excellence for managing those solutions

**FOR ONE OF THE
LARGEST RETAIL BANK**

Built enormous number of applications for front-line workers to bring them to digital transformation journey.

**FOR LARGEST
RESTAURANT GROUP
IN ASIA**

From partner onboarding to goods transfer management, we have automated various usecases by combining Power Platform and Azure Services

**FOR ONE OF THE
LARGEST
MANUFACTURING
COMPANY**
